

**1    ABSTRACT OF THE DISCLOSURE**

2            A nose filter device has a holder and multiple filters, the holder has  
3   multiple holes defined in the holder and the filters are mounted in the holes.  
4   When a user wears the nose filter device, the air can pass from the holes and  
5   through the filters, and then moves into the nose of the user. Because the air  
6   passes through the filters, the air can be cleaned by the nose filter device.
